Source: CDC VAERS Database (Vaccine Adverse Events Reporting System)

\*\* Please note that Event Category values changed between the inception of the VAERS database and the current version; therefore the values in the reporting categories for Emergency Room and Office Visits are not comparable for Covid-19 Vaccine reports and other reports captured prior to the database change. Combining the three reporting categories provides an apples-to-apples comparison of Covid-19 reported events and all other reported events.

\*NOTE: There are 1,166,712 distinct reports captured in VAERS, and 358,379 distinct Covid-19 reports captured, through 6/11/2021. Numerous patients met multiple criteria; therefore there are 1,262,772 total instances displayed in this report for the same time period, and 394,525 Covid-19 instances displayed; but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient reported to the ER, was hospitalized, diagnosed with a life-threatening condition, and died, that patient report would generate four instances in four categories. However, each single row on this report shows only the patients in that category, with no duplicates.
