Total None of the above		38	5.80%
TOTAL INSTANCES REPORTED*		1,286	196.34%
TOTAL ADVERSE EVENTS REPORTED*		655	100.00%

*NOTE: There are 655 distinct adverse events noting carditis, endocarditis, myocarditis, or pericarditis as symptoms following Covid-19 vaccination reported in VAERS through 5/28/2021. Numerous patients met multiple criteria; therefore there are 1,286 total related instances displayed in this report for the same time period, but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient reported to the ER, was hospitalized, diagnosed with a life-threatening condition, and died, that patient report would generate four instances in four categories. However, each single row on this report shows only the patients in that category, with no duplicates.
