| TOTAL INSTANCES REPORTED* | | 1,800 | 192.72% |
| TOTAL ADVERSE EVENTS REPORTED* | | 934 | 100.00% |

*NOTE: There are 934 distinct adverse events noting carditis, endocarditis, myocarditis, or pericarditis as symptoms following Covid-19 vaccination reported in VAERS through 6/4/2021. Numerous patients met multiple criteria; therefore there are 1,800 total related instances displayed in this report for the same time period, but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient reported to the ER, was hospitalized, diagnosed with a life-threatening condition, and died, that patient report would generate four instances in four categories. However, each single row on this report shows only the patients in that category, with no duplicates.
