**\*NOTE:** There are 1,157 distinct adverse events following Covid-19 vaccination, citing the noted symptoms, reported in VAERS through 6/11/2021. Numerous patients met multiple criteria; therefore there are 2,195 total instances meeting the report criteria displayed in this report for the same time period, but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient reported to the ER, was hospitalized, diagnosed with a life-threatening condition, and died, that patient would represent four instances in four categories. However, each single row on this report shows only the patients in that category, with no duplicates.
