***NOTE:** There are 11,981 distinct adverse events following Covid-19 vaccination among children under 18 reported in VAERS through 6/18/2021. Numerous patients met multiple criteria; therefore there are 12,557 total instances meeting the report criteria displayed in this report for the same time period, but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient reported to the ER, was hospitalized, and died, that patient would represent three instances in three categories. However, each single row on this report shows only the patients in that category, with no duplicates.
