***NOTE:** This report excludes the most common cited symptom of "death" among patients who died after Covid-19 vaccination. There are 5,888 distinct patient deaths following Covid-19 vaccination reported in VAERS through 6/4/2021, many of which cite multiple symptoms. Therefore there are 13,272 instances totaled in this report, but each distinct row includes only distinct patient reports (no duplicates) and percentages are calculated as a percent of total database reports
