NOTE 1: There are 569,294 distinct U.S. adverse events following Covid-19 vaccinations, including 606 distinct U.S. Guillain-Barre events, 8,519 distinct U.S. blood clot events, and 2,624 distinct U.S. carditis events reported to VAERS through 9/17/2021. Numerous patients met multiple criteria; therefore there are 589,185 total reported medical diagnoses following Covid-19 vaccinations, which include 9,326 instances of blood clots, 659 instances of Guillain-Barre, and 2,879 instances of carditis meeting the report criteria outlined above. But each value displayed on this report includes only distinct patient records (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, if a patient received a first dose of Pfizer vaccine and a second dose of Moderna vaccine, that patient's record would populate two instances in two categories.

NOTE 2: The "Index" values displayed in this report represent the proportion of fully vaccinated U.S. residents who received that manufacturer's vaccine, less the proportion of reported adverse events attributed to recipients of that manufacturer's product. For instance, to date, 8.0% of fully vaccinated U.S. residents received the Janssen vaccine. As of 9/17/2021, 9.2% of Covid-19 vaccine-associated deaths reported to VAERS were patients who received Janssen vaccines. So the Overall Mortality Index for the Janssen vaccine is 8.0% - 9.2% = -1.1%. The Overall Safety Index for the Janssen vaccine is the proportion of fully vaccinated U.S. residents who got the Janssen vaccine less the proportion of ALL adverse events reported for recipients of the Janssen vaccine, or 8.0% - 8.9% = -.8%. (Figures are rounded for display; this note may display rounding errors.)
