[Source: CDC VAERS Database \(Vaccine Adverse Events Reporting System\)](#)

***NOTE:** There are 3,450 distinct pregnancy loss events captured in VAERS, and 2,192 distinct Covid-19 associated pregnancy loss events captured, through 10/29/2021. Some patients met multiple criteria; therefore there are 3,541 total instances of pregnancy loss including 2,241 instances of Covid-19 associated pregnancy loss displayed in this report. But each value displayed on this report includes only distinct patient records (no duplicates) and percentages are calculated as a percent of total patient reports received. For instance, when both "foetal loss" and "stillbirth" are noted in a single adverse event record, that patient's record will populate two instances in two categories on this report.
